
```

% This script file computes the optimal investment levels TAOpt and
    TBOpt
% for the two firms (Firm A and Firm B) of the Simplified
    Oligopolistic
% Optimal Influence model which also involves a single consumer C. The
    rest
% of the model parameters (SOpt,Xopt,POpt,Qopt,Fopt) are also
    computed.

% Specifically, the internal model parameters whose optimal values are
    to
% be determined during the grid searching optimization process are the
% following:
% (i):    [TAopt,TBOpt]
% (ii):   [SAopt,SCopt,SBOpt]
% (iii):  [XAopt,XBOpt]
% (iv):   [PAopt,PBOpt] (These are the optimal prices!!!)
% (v):    [QAopt,QBOpt]
% (vi):   [FAopt FBopt FA_rev_opt FB_rev_opt FA_cost_opt FB_rev_opt]

% The grid searching process will be conducted within the 8-
dimensional
% space defined by the Cartesian product of the following external
    model
% parameters:
% (i):    LA (direct influnce exerted by consumer C on Firm A).
% (ii):   LB (direct influnce exerted by consumer C on Firm B).
% (iii):  PA (initial belief consumer C holds for product A).
% (iv):   PB (initial belief consumer C holds for product B).
% (v):    M (sensitivity coefficient).
% (vi):   K (sensitivity coefficient).
% (vii):  C (marginal cost).
% (viii): G (marginal influence cost or Gamma).

% IMPORTANT NOTE!!!
% Mind that the underlying continuous game may not have an equilibrium
    point
% for any given configuration of the external parameters. Since all
    the
% internal parameters to be determined accept positive values, the
    value of
% (-1) will be utilized in order to indicate the absence of an
    equilibrium
% point for a particular configuration of the external parameters.

% Define ranges and corresponding increment step for each external
    parameter
% of the Simplified Oligopolistic Optimal Influence model.
